

SCREEN | NOIR |

FEATURES

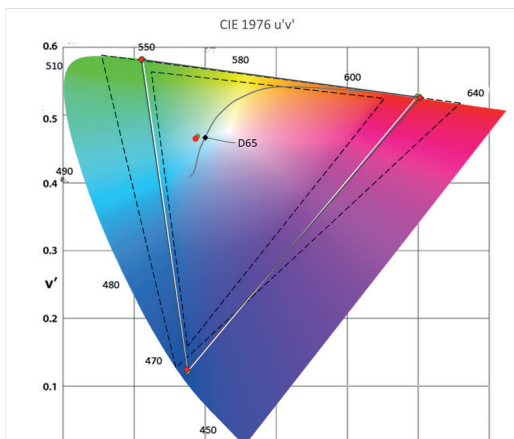

- High Contrast
- Gain ~0.08
- Fire protection class B1
- Compatible with full white frames
- Can be produced to specific dimensions as well
- Ambient light absorption

One of LANG AG's new products in the field of projection is Screen Noir, which is a black projection screen fabric. Screen Noir impresses with its deep black surface and insensitivity through ambient light absorption. Thus, excellent and high-contrast images can be created even in bright surroundings. Due to its wide viewing angle, the screen is particularly predestined for multiscreen projections.

SCREEN NOIR 100

WHITE SCREEN

Screen Noir 100 creates a never-seen-before visual experience with realistic colors and an increased black level.

The black projection surface absorbs ambient light for excellent brightness and color performance.

Compared to a white projection screen surface, Screen Noir 100 enables more intensive colors to be projected.
